International Impact Assessment Model (IIAM)

The IIAM has been developed by Charles River Associates (CRA) to analyze the economic impacts of greenhouse gas policies. It can analyze different policies on more than 100 nations over a period from present day to 2030. The IIAM allows for interactive analysis and discussions of alternative carbon abatement proposals and their effects on countries. The system includes two general equilibrium models (a multi-region trade model and a single country model) and has been built using GAMS/MPSGE and GAMS/PATH.
